

PANGURU AARONJAMES

Skills

- SQL (SQL Server, MySQL, PostgreSQL)
- Python (Pandas, NumPy, SciPy, Matplotlib, Seaborn, Sklearn)
- Tableau
- Excel (VLOOKUP, Conditional Formatting, Pivot Tables)

Projects

Sales Performance Dashboard

- Analysed 2023 sales data across regions, categories, and states to evaluate YoY performance in revenue, profit, and customer growth
- Built an interactive dashboard tracking KPIs (Revenue, Profit, Quantity, Customers) with monthly trend comparisons against prior-year benchmarks
- Identified that a reported 9.95% YoY profit increase masked steep declines in the Central (-71%) and South (-49%) regions and in Furniture (-61.73%), with growth driven entirely by the West region (+111.26%) and Technology category
- Delivered state-level and regional breakdowns to help stakeholders target underperforming segments rather than rely on misleading aggregate growth figures

SQL Data Analyst Job Market Analysis

- Utilised SQL (PostgreSQL) to analyse thousands of 2023 data analyst job postings, examining salary, location, and required skills data
- Wrote CTEs, subqueries, and JOINS to compare in-demand skills against highest-paying skills for remote data analyst roles
- Found that while SQL, Python, and Excel dominate job postings by demand, specialised skills like PySpark (\$208K avg) and Bitbucket (\$189K avg) command significantly higher salaries
- Visualised findings in Excel (pivot tables, interactive workbooks) to identify SQL and Python as the optimal skills combining both high demand and high pay

FIFA World Cup Team Performance Analysis

- Utilised Python to analyse World Cup team performance across possession, xG, pressing, passing, and physical metrics
- Applied PCA and K-Means clustering to identify distinct team playing styles and performance patterns
- Discovered Spain as a statistical outlier, driven by high possession, strong xG, line-breaking actions, and aggressive pressing

EXPERIENCE

Business Analyst Intern Klay Clean Engineering – [Abuja] | 2025 – 2026

- Cleaned and validated raw business data to ensure accuracy and consistency for downstream reporting and analysis
- Analysed business operations data to identify trends and support decision-making across teams

- Served as a communication bridge between technical and non-technical stakeholders, translating data findings into clear, actionable English-language reports and summaries
- Collaborated with cross-functional teams to streamline data workflows and improve reporting efficiency
